

SPOTTED

**Satellite oPen data fOr smarT
ciTy sErVICES Development**

This project has received funding from the European Health and Digital Executive Agency: Grant Agreement under the Connecting Europe Facility (CEF) – Telecommunications Sector – Agreement No INEA/CEF/ICT/A2020/2373501

Napoli use case

Presenter: Francesca Pignataro

Organisation:

Comune di Napoli (Napoli)

SPOTTED Kick-Off Meeting

Remote, 22 September 2021

3d metropolitan city
per number of
inhabitants in Italy

1st for housing
density

Napoli

The city in numbers

population

The city:
970.185 ab.

area

The city:
117 sq.km

density

The city:
8.292
ab/kmq

metropolitan context

Pop: 3.012.243 ab.
Area: 1.171 sq.km
Density: 2,572
ab/kmq

urban/green rate

Urban area 74sqkm 60%
Prevalent green surface
39sqkm
Accessible parks and
recreation
5 sqkm (3,9%)

climate indexes

Heat waves &
Extreme
precipitation
(n. of events)
Euro cordex data

The city problems

occupation
social strain
school dropout

irregular
urban
development

Digital
transition

lack of
economic
resources and
political
uncertainty

green
infrastructure
distress
factors

Hydrogeological
Earthquake
Climate change
Volcano

RISK

Napoli

green asset management issues

Preserve urban agricultural persistence

Prevent diseases, monitor and plan for trees and green space protection

and monitor implementation actions

Napoli

Planning issues

UNESCO city center

public space management and
implementation
in a dense, compact cityscape

Napoli

Planning issues

regeneration of ex industrial areas

re-use of natural resources

Fragile coastal landscape and change detection - unused spaces

Redesign a relationship city/coastline

Napoli

Climate change issues

contemporary urban landscapes
affected by flood events
when extreme precipitations strike the city

Napoli

Climate change issues

public space and
'irregular' solutions
to heatwaves events

Roles/Napoli

what we are expected to do in the consortium

*...provide the **requirements** for the services, related to green transition and sustainable urban planning, to be developed during the project execution;*

*...provide **local data** to leverage on (e.g. open data, IoT data, urban plans, cartographies).*

*...support the **validation** of the defined/implemented services in their territory and provide proof of service replicability and cross-border capability.*

Napoli

- User requirements definition & co-creation for research tasks
- involvement of local actors: other offices of the municipality, other local government actors and authorities, the citizens ...
- Local data retrieval and organization
- Briefing and reports on Urban and metropolitan planning activities and regeneration projects
- ...
- Validation for change detection results

NAPOLI expectations

What we expect to gain from the project?

- Knowledge data and tools to detect **change** in urban and natural environment
- Tools to **monitor the effects of climate adaptation strategies**
- Strengthening cooperation with other EU end-users, exchange of best practices
- Improved **user-friendliness** of landscape and climate information data
- Information and **guidelines for urban planning and regeneration projects** for the Municipality and metropolitan area planning services and environmental monitoring
- tools to be extended to private planners, designers and consultants involved into urban and **neighborhood scale projects**

Climate change awareness is growing and the city decision makers need to finalize it and implement actions -Urban regeneration policies and adaptation strategies need a monitoring system and cost-benefit evaluation*

**see urban planning strategy integrates results from EU H2020 project Clarity - Integrated Climate Adaptation Service Tools for Improving Resilience Measure Efficiency*

SPOTTED will support planners to produce and use High Value Geospatial Datasets for public decisions

**CITTÀ, AMBIENTE, DIRITTI
E BENI COMUNI**

Piano Urbanistico Comunale
Documento di Indirizzi

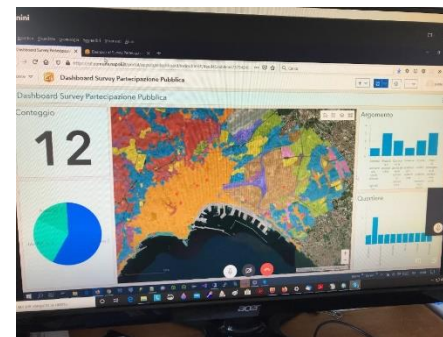

Some detail on objectives

- *define digital geo-datasets for green areas management with dashboards and tools for easy modification/implementation – integrate information*
- *Detect change, produce statistics and maps to monitor strategies in adaptation*
- *Spot episodes of soil consumption ‘realtime’ and help planners to prevent it*
- *Define criteria and select susceptible areas for urban reforestation*
- *Produce maps to support actions (i.e. green area indexes in neighborhood contexts)*
- *Evaluate impacts on people (climate perception – equity on public space quality)*
- *Use and produce new open datasets, implement new contents in the city administration tools*

Setting up Napoli pilot - data, tools and plans

- Clarity previsional framework and datasets (landuse, tree coverage, climate indexes in a 30 yrs prevision)
- PON Metro projects, digital transition tools (Environment&urban digital geospatial management tools – PPAT) - tool integration
- PUC piano urbanistico comunale – city masterplan – to be approved in a short time
- PUMS urban sustainable mobility plan, recently approved, complex monitoring system
- PAESC sustainable energy & climate adaptation actions - developing

Expertise required for SPOTTED – people involved

Andrea Ceudech: architect, Chief of the Planning department, City of Naples. He deals with planning issues and urban regeneration strategies

Luigi Volpe: engineer, Digital Transition manager, in charge of the digital services & digital Agenda of the Municipality

Francesca Pignataro: architect, data management and Geographical Information System for the city of Naples

Comune di Napoli - Naples Municipality

Other Local entities involved

Assessorato all'Urbanistica e Area Urbanistica

Assessorato Sviluppo

Sistemi Informativi

other local actors will be involved , following the research activities
